PONDS VOINTING STOCKS

J. M. WHEELER ON GOLDFIELD

Salt Maker Gives Lively Account of What He Saw.

NOTHING LIKE IT IN WORLD

DALY CUTS LOOSE - BEAVER MINES ARE BONDED.

After spending a month in the Goldfield district, J. M. Wheeler of the South Swansea returned home again on Friday. He left Hugh Trenam, who accompanied him, at camp and probably about the end of the year Mr. Wheeler will go back there himself.

"I never saw anything like it in my e," said Mr. Wheeler yesterday, "and I doubt if there ever was such another place in the world. Did I secure anything? Well, I should say not! Properties anywhere within long range distance of the mines that have been tance of the mines that have been opened up are held at such figures that a man with money enough to make even a first payment on a bond would hardly need to engage in the business of mining. For a group of four or five undeveloped claims, claims without a showing of ore, would cost anywhere from \$50,000 to \$200,000, and the owners would not give you a day to make a first payment of \$10,000. Why, I came out with a man who had sold an eighth interest in a 100-foot lease that has until the end of the year to run for \$4,000, or at the rate of \$32,000 for a lease that only has about seventy-five days to run.

LAND A GOLD MEDAL.

Salt Lakers Capture Prize For Best Assavers' Scales.

Assavers' Scales.

A wire from St. Louis advises B. F. Bauer, president of the Salt Lake Hardware company, that the Keller assayers' scales and balances, manufactured exclusively in this city, have been awarded a gold medal at the World's fair. This is the first gold medal to reach Utah from the exposition and Mr. Bauer is proud of the fact that it comes as a reward of his determination to stand behind a proposition that he felt from the beginning had the merit to justify the large expenditures on his part that the establishment of the business recuired.

Guired.

It is no small feather in the cap of Salt Lake to be able to say that its artisans beat the world in the manufacture of instruments as delicate as must be the expert assayer and chemists' balances. For four years now these balances have been manufactured here and shipped to all parts of the world. They are used in all kinds of high class work, including the testing of other makes of scales, thus making them the standard.

best eating establishment in the place. He got started about a week ago. His doors never close, and there is never an hour in the twenty-four that his tables are not full.

"I saw any number of Salt Lakers while I was there, but the town is all hustle and busile. You may meet a man today and not clap your eyes on him again for a week. It is a wonderful place and a wonderful district. I believe hundreds of new strikes will be made there during the next few months."

**S7.400 heavier than during the previous week, the total, as reported by McCornick & Co., being \$51,100. Yesterday's proportion of the amount was \$100,300, divided as follows: Silver, lead, gold and copper ores, \$54,500; base bullion, \$42,700; gold bars, \$3,100. Tonopah has been also Goldfield, though much of the very rich ore from the latter camp finds a market at San Francisco. Not a little fine ore from Bingham has been sold during the past few days, while a number of the more isolated camps have been represented.

resented.

The output from the individual copper plants during the week has been barely nominal, that is, the cars sent out have been one or two less than for the week ending on the 8th. The record is as fol-

HONERINE TUNNEL WORK.

Big Bore Is Now Going in at a Lively Pace.

Superintendent E. J. Raddatz of the Honerine bonanza was in from camp again yesterday. He says that good progress is now being made in driving the long drain and operating tunnel. An average of about sixty feet a week is now being maintained, and while there is still lots of water, it does not interfere so much as formerly with the work, as it appears to be making more from the bottom.

Developments on the 900 level continue to bring forth most substantial results, and some magnificent bodies of ore-ore not previously encountered-are being opened up.

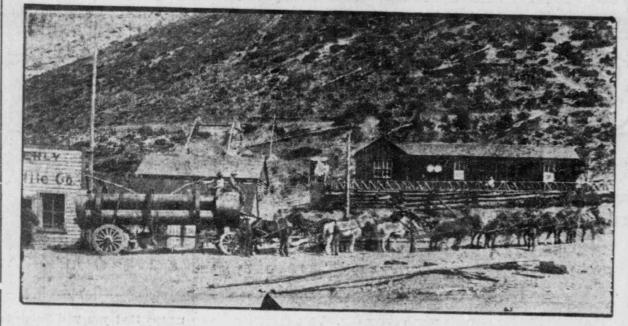

The mammoth milling plant is doing better and better work all the time and the usual tonnage of high-grade concentrates is coming regularly to market.

MOVING HEAVY MILL MACHINERY.

The accompanying illustration shows the arrival at Kimberley, in the Gold Mountain district, of the new Argall drying furnace that has just been installed in the Annie Laurie company's milling plant. This is the heaviest single piece of machinery that was ever moved into the camp over the tortuous mountain road that heaviest single piece of machinery that was ever moved into the camp over the fortuous mountain road that winds its way up the canyons from Sevier station, a distance of sixteen miles. The dryer weighs twelve tons, and it required two and one-half days for the fourteen horses to land it safely at camp, which is located at an altitude of 2,000 feet above sea level and 5,000 feet higher than Sevier. The roaster is 7x22 feet in size. It contains four twenty-five-inch tubes, built of five-eighths steel, these being lined with one-fourth-inch The dryer has a capacity of something over 200 tons of ore per day.

ANOTHER GOLDFIELD STRIKE.

Simmerone Fraction Has Ore Run-

ning \$250 to \$2,500 Per Ton.

(Special to The Herald.)

Goldfield. Nev., via Sodaville, Oct. 11.—
A splendid strike has just been made on the Simmerone Fraction, about two miles east of here. The ledge is two feet wide and assays run from \$250 to \$2.500 per ton in gold. The vein runs into the Blue Bull Mining company's ground, only eighty feet distant.

(Signed) WESLEY PAUL.

The Blue Bull property adjoins the Potlatch, in which Frank H. Lathrap and other Salt Lakers are interested. E. Hudson and others own property near

the boundary lines of properties. Of course, if anything is found and you want to do something with your dis covery, then the owner or owners have to be bargained with. The whole coun-W. M. White and Chicago Talent Get try looks alike. Strikes are constantly being made in the most unlikely places and the rock carrying the gold varies so much in appearance and texture that there is absolutely nothing to guide the prospector. He 'pans' everything and when colors are found he loser attention to the ground in which he obtains results.

"I visited about all the producing properties in the district, and I must confess that many of them were revelations to me. Probably three carloads of rich ore per day is being hauled out of the camp and a great deal more than that would be if teams could be found to do the hauling. Great quantities of ore is sacked and ready for shipment, while there are many great dumps of what is termed milling rock, rock that will go, on the average, possibly \$40 per ton. The last big strike was made in the Tonopah club. Here they have fourteen feet of ore that will average without doubt \$159 per ton.

New Discoveries.

"Probably the most sensational dis robably the most sensational discovery of the past few weeks was made in the Quartzite Fraction. Here they have a shaft down thirty feet and are rolling ore out to it from both north and south. This ore body is now opened up for a width of about forty feet. The rock pans well, and I have no doubt that the claim of the leaser that it averages \$300 per ton is correct They are taking out about five tons per day with a windlass, or at the rate of \$1,500 every twenty-four hours, with only three or four men on a shift. This property is almost due east of the Great Bend, which is being developed by a Salt Lake crowd in a vigorous anner, but with what results I did not learn

Life in the Camp.

"The main street of Goldfield is now as long as three of these Salt Lake blocks. Lots in the town are selling like hot cakes at \$2,500 to \$6,000 each, oming more plentiful, is going on at a lively clip. There are several adobe yards there. Mud brick of a small size readily sell for \$30 per 1,009, while for the larger size \$40 has to be paid. Many nice and comfortable houses are being built of this material, and gradually people are getting in shape to spend the winter comfortably. Hay is worth \$70 a ton, and lumber sells at \$70 to \$50

"At the postoffice there are two de-livery windows. From early morning till midnight you can see from 190 to 340 people in line waiting to get their mail. The only exception is for about two hours in the afternoon, while the incoming mails are being sorted and the stamps cancelled. It is next to impossible to get a paper. They don't have time to look for them. At one little drug store an effort is made to supply people with papers, but it is only ab once a week that he can get them from the postoffice, if they happen to reach there. Salt Lake papers are very scarce, and when a bundle of them does show up they don't last a minute. The

WEEK'S ORE AND BULLION.

That explains about the condition of things as they relate to securing footholds in that portion of the camp already located, and painted stakes are in evidence everywhere for a radius of ten miles, I should judge.

Prospecting Unrestricted.

"No one is restricted from prospecting, however. Hundreds of men can be seen 'panning' all over the country every day, no attention being paid to the boundary lines of properties. Of

Silver, 57%c per ounce.
Copper (casting), 12%c per pound.
Lead, in ore, \$3.50; New York, \$4.20 per 100 pounds.

Utah Stocks in Boston. (Special to The Herald.)

Boston, Mass., Oct. 15.—There was a lively market in the coppers today, with much strength. United States was the leader, with New York a steady buyer. It is said Standard Oil interests have been buying heavily all week, but the control carnot be secured. Quotations:

MINING STOCK EXCHANGE.

Week's Trading Shows Rapid Improvement in Market.

the Hobson Group.

W. M. White has just returned from Beaver county, where he succeeded in landing a, bond on the Hobson group of four claims, adjoining the Majestic company's Harrington-Hickory on the west, from James and John Forgie. Chicago talent is interested with Mr. White in the proposition and during the coming week an active campaign of development will be inaugurated on the ground.

A splendid ledge has been opened through open cuts and incline shafts, one of the latter having attained a depth of 129 feet. Samples of the ore fram various openings show good values in silver, lead and gold, the average of them ail disclosing a value of \$27.30 per ton. From the property to the Majestic smelter is only five miles and when that plant begins the handling of silver-lead ores Mr. White expects his property to be in shape to supply a good tonnage.

It is the intention to begin the running of a new tunnel at once in order that the ledge can be opened at considerable depth and mining made easy and economical. No great distance will have to be run to make connections and this done the ledge will be drifted upon and the ground put in shape for stoping operations.

Mr. White reports that Superintendent There has been more life and snap to the mining share market during the past week than has been seen in nearly two years. A larger amount of business has been done frequently during that time, but the market has exhibited no such signs of strength, nor has the public been as much interested. There was an undercurrent to the previous week's trading that gave unmistakable evidence that a grevival was at hand and the past six revival was at hand and the past six ays' trading has shown that the signs

Two of Them Now Being Operated in Federal Tunnel.

Two big machine drills are now pounding away at the face of the cross cut from the Federal tunnel at the Batty Mining company's property. Park City, the object being to connect with the ledge in Mazeppa ground at the earliest possible moment. A start was made with one drill several days ago. During the past week the company's engineers. O. A. Palmer has visited the mine and mapped out the direction that the drift is to follow, and his work finished, the second machine was brought into play.

It is said that the long tunnel has been placed in perfect repair, new track has been laid, the pipe lines run to the face and everything placed in ship-shape for an aggressive campaign. All of which means that the old Daly is going to be heard from in the not distant future in a manner that will be to the liking of the shareholders of the company.

Grand Central has been doing business at and above \$4 until yesterday, when it slipped back a little and sold at \$3.95. Victoria, which adjoins the Grand Central, stood at \$1.05 bid on Monday. Since that time it has sold steadily up the line to \$1.25. Mammoth has advanced from \$1.80 to \$1.90. Victor from 2c to 3½c, and Little Chief from 1½c to 3½c. Practically all of the other Tintic stocks have either moved up a little or held firm, and quite a number of them have participated more or less in the trading.

Daly-West, on the strength of its weakness in Boston, has dropped a little under the \$13 mark, but with this exception Park City stocks have behaved verywell. Daly-Judge has not strayed over life from the \$3.50 mark, while Daly, which has been rather weak for some little time past, has risen from around \$2.05 to \$2.35 per share. New York has been very quiet until the last day or two, but there are signs that it, also, is about ready to make a stir.

Consolidated Mercur has been unusually firm all week and sales that have been recorded were at slowly advancing Grand Central has been doing business

show up they don't last a minute. The druggist told me he had orders for them, and he knew the bundles were mailed here, but it was not often that they reached him.

Mining Notes.

Manager Sidney Bamberger of the For-tuna went out to Bingham yesterday to look after matters at that splendid prop-

Two cars of ore from Tonopah and one from Bingham were reported at the Tay-lor & Brunton sampler yesterday morn-

ing.

Joseph Dederich went to Newhouse yesterday to note the progress of work at the big Cactus milling plant. Two cars of structural steel arrived at the plant yesterday. They will allow of the early completion of the boiler and power house buildings. Additional material is en route and the work should progress very rapidly from now on.

The Pioneer sampler reported three cars of ore from Nevada yesterday morning. of ore from Nevada yesterday morning.

Ernest Bamberger, manager or the Daly-West, returned from a three days trip to the company's mines Friday night. He reports everything moving smoothly and the mine looking well, though he reuses to stand for a big strike that was currently talked of on the streets a day or two ago.

Manager I. F. Darmer and Suppose II.

currently talked of on the streets a day or two ago.

Manager J. E. Darmer and Surveyor H. W. Horne left for the May Day last night. It is understood that a number of interested men will be at the mine today for the purpose of inspecting the late strike. Everything is running smoothly at the Century and Manager P. W. Madsen says he expects to connect with the Century yein through the new timnel during the next few days. This tunnel has now been driven 152 feet, and eight or ten feet more should carry the face into the vein. The daily reports sent down to him by the superintendent show that the ore milled is maintaining a good average, and that about three and one-half pounds of gold laden amalgam is being taken from the plates every day. Mr. Madsen is inclined to think that, notwithstanding the large amount of new development work that is being done, the company will be in shape to pay the sharenolders a dividend for the holidays.

Bingham Bulletin: About 160 tons of ore

Bingham Bulletin: About 160 tons of ore carrying 8 per cent lead, 15 ounces silver and some gold is being treated daily at the Queen (Butterfields mill with excellent results, the tailings showing very little loss. Manager Lavignino seems to have at last solved the problem of how to treat the Butterfield low grades, of which there are thousands of tons blocked out. Barrion Sewell, Edward Brush and Ana revival was at hand and the past six lays' trading has shown that the signs were correctly interpreted.

Sales of stock aggregated 232,235 shares, or more than twice the number changing hands during the week before. The selling value of the shares was \$52,120.61, or a gain of \$19,670.74.

May Day, of course, has been the star attraction, though there have been substantial gains and considerable activity in a number of other stocks. Last Monday morning it was to be had at 14c to 14% per share. Yesterday it sold at 23% to 2.0c. From all accounts the new ore body is opening out better all the time and the impression prevails that the strike is apit to prove one of the most important made in the Tintic district in recent years.

Uncle Sam Consolidated, May Day's next door neighbor, has also stiffened up materially. It opened the week at 23c and, on a report that the May Day strike had been followed up to the dividing line, it rapidly rose to 30c. An investigation by Uncle Sam officials showed that its territory had not been reached by some little distance, and the stock eased 6ff again. It closes strong at 255c.
